Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sollars, Jr., et al. in view of Wallentin, et al. (6,447,003).

Sollars, Jr. teaches an air-bag, the air-bag being formed from fabric and having an inflatable region wherein the fabric is woven to have a random or quasi-random distribution of floats. Sollars, Jr. is silent to the airbag having mounts. Sollars, Jr. teaches an inflator assembly 124, with respect to a gas supply duct, it is old and well known in the art for the inflatable curtain to have the duct attached to the inflator. Wallentin teaches an airbag having a protruding mounting tab 20 with an aperture 21 formed from a fabric. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the airbag of Sollars, Jr. to have an extension of the airbag fabric to provide mounts to secure the airbag to a vehicle. Regarding claims 3-5, the method of forming is a mere design choice and the method of forming the device is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.

Response to Arguments

Applicant's arguments filed May 26, 2009 have been fully considered but they are not persuasive. The applicant is arguing the fabric of the airbag is formed from a fabric woven to

have a random or quasi-random distribution of floats, however the examiner notes the method of forming is a mere design choice and the method of forming the device is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight. Further, the prior art clearly defines of the claimed structure.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
